Abstract

This publication is NOT the annual National Marine Fisheries Service (NMFS) yearbook of fishery statistics for the United States for 2020. It’s a grab-bag of pieces put together for demo purposes only. The report provides, maybe, data on U.S. recreational catch and commercial fisheries landings and value as well as other aspects of U.S. commercial fishing. In addition, data are reported on the U.S. fishery processing industry, imports and exports of fishery-related products, and domestic supply and per capita consumption of fishery products.

2020 FISHERIES OF THE UNITED STATES

Status of Stocks - how to get rich quick

Status of Stocks is an annual report to Congress on the status of U.S. fisheries and is required by the Magnuson-Stevens Fishery Conservation and Management Act.¹ This report, which is published each spring, summarizes the number of stocks on the overfished, overfishing, and rebuilt lists for U.S. federally managed fish stocks and stock complexes. The report also shows trends over time, discusses the value and contributions of our partners, and highlights how management actions taken by NOAA Fisheries have improved the status of U.S. federally managed stocks.

¹The real report is here <https://www.fisheries.noaa.gov/resource/document/fisheries-united-states-2020>, but I copied and jumbled a lot of the text and graphics for demo purposes.

Figure 1. Fish Stocks

Fisheries of the United States

Fisheries of the United States, published each fall, has been produced in its various forms for more than 100 years. It is the NOAA Fisheries yearbook of fishery statistics for the United States. It provides a snapshot of data, primarily at the national level, on U.S. recreational catch and commercial fisheries landings and value. In addition, data are reported on U.S. aquaculture production, the U.S. seafood processing industry, imports and exports of fishery-related products, and domestic supply and per capita consumption of fishery products [1].

U.S. Marine Recreational Fisheries

NOAA Fisheries' Marine Recreational Information Program (MRIP) is the state-regional federal partnership that develops, improves, and implements a national network of surveys to estimate how many fish anglers catch and how many trips they take [2, 3]. It provides a snapshot of data, primarily at the national level, on U.S. recreational catch and commercial fisheries landings and value. In addition, data are reported on U.S. aquaculture production, the U.S. seafood processing industry, imports and exports of fishery-related products, and domestic supply and per capita consumption of fishery products [1]. The report also shows trends over time, discusses the value and contributions of our partners, and highlights how management actions

taken by NOAA Fisheries have improved the status of U.S. federally managed stocks. 35

Acknowledgments 36

I am grateful for the insightful comments offered by the anonymous peer reviewers at 37
Books & Texts. The generosity and expertise of one and all have improved this study in 38
innumerable ways and saved me from many errors; those that inevitably remain are 39
entirely my own responsibility. 40
